Smart AMI Networking Website Now Online

Eka Systems Launches Open Website for Smart Network Information

Germantown, MD, - June 20, 2008 - Eka Systems, a global provider of Advanced Metering Infrastructure (AMI) and Smart Grid solutions for electric, gas, and water utilities, today announced that it has launched a new website focusing on Smart Network - Smart Grid technologies, applications, solutions & services capabilities.

The site, www.ekasystems.com, has been designed and organized to serve as a one-stop information source for utilities seeking details on electric, water, and gas Smart Networking applications. Site visitors are not required to fill out opt-in forms and detailed registration data to access the latest info on AMI, intelligent mesh networking, wireless security, case studies, white papers, breaking news, etc. The company has taken an "Open Site" approach in offering present and prospective clients all the details that they seek on advanced metering solutions.

"We put ourselves in the utility's shoes when conceptualizing what the new site should be like," said Srinu Krishnamurthy, Eka Systems' VP of Corporate Development. "Like most people, I don't like filling out inquiry forms to gain information which usually ends up being too general to help and results in endless spam. We have publically posted the details that utilities seek when issuing a RFI – technology, intelligent routing, scalable networks, security, and so on. At Eka Systems we're here to partner with customers - helping them achieve solutions to the business challenges that keep them awake at night."

On the site, utilities can learn how to:

- Improve meter to cash efficiency with uniquely scalable and proven mesh radio architecture for networking electric, water, and gas meters from major vendors
- Enhance customer experience with improved billing, rapid fault recovery, and energy efficiency initiatives
- Grow with improved revenue protection from reducing IT effort, minimizing truck rolls, on-demand usage monitoring, and remote device control
- Implement auto-configuring AMI networks that self manage their behavior and scale from tens of thousands to millions of meters.

About Eka Systems

Eka Systems is a global manufacturer and supplier of wireless, self-managing, self-healing Smart Network and Smart Grid networking solutions that provide unrestricted monitoring and control of customer water, electric and gas data; enabling utility companies to create efficient,

flexible and highly scalable AMI, AMR, and Distribution Automation solutions while simultaneously enhancing overall customer satisfaction.

Eka's portfolio features EkaNet™ Smart Network which provides comprehensive security for a utility's entire network and its data. EkaNet Solutions scale easily, self-configure, and self-heal without burdensome installation and cost issues while managing themselves, thereby eliminating traditional IT management costs associated with smart metering.
